

# Receiving and Further Processing of eBill Invoices in Business Software

***eBill is the leading digital invoice solution for Switzerland. Having now been adopted by over two million private individuals, eBill is also becoming increasingly important in the business customer segment.***

#### ***eBill for Commercial Invoice Recipients***

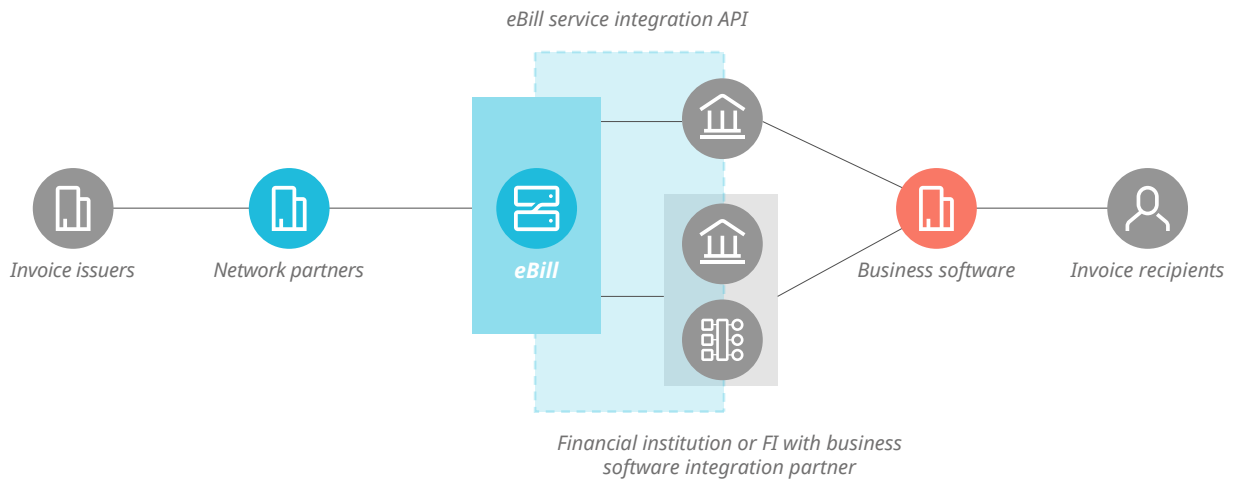

*While the first phase focused on ensuring eBill achieved widespread coverage of private invoice recipients with eBill, the focus is now increasingly switching towards business customers as well. The aim here is to enable business customers to receive and process invoices in eBill format using various digital channels.*

#### ***Receiving eBill Invoices in Business Software***

*The expansion of eBill for Business will enable financial institutions' business customers to receive invoices in eBill format seamlessly in their business software in the near future. As a software partner, you should start preparing for this now.*

#### ***Advantages for Companies with Business Software***

- ***Proven channels:*** *The financial institutions send the eBill invoice to the business customers via the channels that are already used today, such as EBICS or bLink.*
- ***Simple processes:*** *Once the eBill invoice is received in the software, booking and payment are carried out using the standard processes of the respective business customer. Therefore, no adjustments to the existing processes are required.*
- ***Convenient archiving:*** *In addition to the electronic invoice data, the business customer will also receive a corresponding PDF. The invoice receipt can thus be easily archived using the existing processes.*

**eBill for Business allows you to successfully grow as a software partner by expanding your offering and meeting the needs of different business customers!**

**Timeline and action required by software partners for seamless eBill integration for business customers with business software**
